

Instructions for using your GOLF BALL STAMP

Begin by making a few practice impressions on an old golf ball. Turn the stamp upside down and set it on a table. Remove the cover. Hold the golf ball directly over the center of the stamp.

Using light pressure, “roll” the ball over the center of the stamp. It may be helpful to roll the ball left-to-right and front-to-back so the entire stamp image is pressed against the surface of the ball.

Lift the ball straight up and allow the ink to dry for about 10 seconds before touching the image. Stamp again on several areas of the ball so you’ll quickly see your mark as you approach.

Re-Inking the Stamp

When the stamp begins to run out of ink, refill it only with Golf Ball Stamp Ink! No other ink will work with your stamp. Start by removing the cover.

With the stamp “up” put a few drops of ink directly on top of the printing message. DO NOT OVER INK as it will be difficult to get a good impression if too much ink is in the stamp.

Using a tissue or other soft cloth, blot the surface of the stamp using your thumb. DO NOT RUB! Press the tissue straight down on the printing message to absorb excess ink. Stamp a piece of paper a few times before stamping a ball.

Any time that the stamp appears to be over inked, excess ink can be blotted away using the tissue method described above. When using the stamp in areas of high humidity or high heat, the ink in the stamp may become thinner in viscosity and the stamp may need to be blotted occasionally.

When not in use be sure the cover is securely on the stamp or the ink will dry out!

Keep the stamp and refill ink out of the reach of children. Keep away from open flame. Do not take internally. Avoid contact with eyes and prolonged contact with skin. Keep stamp and refill ink bottle closed when not in use. Permanence of imprint will be significantly shorter when using “super-slick” or “non-stick” coated cover golf balls.
